TechStore – Online Shopping Page

README

A single-page, front-end-only online shopping demo built with plain **HTML, CSS and JavaScript**. It shows a catalogue of tech gadgets with category filtering, live search and a simple cart counter. The footer labels it a student project demonstration. File: **online shopping 2.html**.

Features

- **Responsive layout** – 4 product columns on desktop, 2 on tablets (≤ 950 px), 1 on phones (≤ 600 px).
- **Navigation bar** – logo, search box, Products and Services links, and a cart link with an item count.
- **Hero banner** – purple gradient promo with a “Shop Now” button (image hidden on phones).
- **Category filter** – All, Mobiles, Laptops, Audio, Accessories.
- **Live search** – matches product name and description as you type, combined with the category filter.
- **Empty state** – “No products found. Try another search.” when nothing matches.
- **Product cards** – image, discount badge, name, description, star rating, price, old price and an Add to Cart button.
- **Cart** – each add updates the header count and shows an alert with the item name, item count and running total in rupees; the cart link shows a summary alert.
- **Services strip and footer.**

Products (8)

Product	Category	Price	Old price	Discount	Rating
Smartphone	Mobiles	₹15,999	₹19,999	20%	4.8
Power Laptop	Laptops	₹42,499	₹49,999	15%	4.7
Wireless Headphones	Audio	₹1,399	₹1,999	30%	4.5
Smart Watch	Accessories	₹2,249	₹2,999	25%	4.6
Wireless Earbuds	Audio	₹1,599	₹1,999	20%	4.4
Wireless Mouse	Accessories	₹899	₹999	10%	4.3
Premium Phone	Mobiles	₹21,999	₹24,999	12%	4.7
Student Laptop	Laptops	₹32,799	₹39,999	18%	4.5

How to run

- Download **online shopping 2.html**.
- Open it in any modern browser (Chrome, Edge, Firefox, Safari).
- Stay online so the product images can load (they come from Unsplash).

Tech used

- HTML5 – semantic `header`, `section`, `footer`.
- CSS3 – Flexbox, Grid, media queries, gradients, hover transitions.
- Vanilla JavaScript – DOM events, `dataset`, `querySelectorAll`, `toLocaleString("en-IN")`.

Notes and limitations

- Images load from Unsplash and will not show offline.
- The cart only keeps a count and total in memory: no item list, quantities, removal, checkout, payment or saved state. Refreshing resets it.
- Cart details appear in browser `alert()` pop-ups.
- Search and category filtering are coded twice (an input handler and `filterProducts()`) and could be merged.
- The cart link points to `#cart`, which does not exist; JavaScript intercepts the click.

Companion files

screenshots.pdf shows each page state; **documentation.pdf** is the full structure and code walkthrough.
